

PRESENTATION INTRO SCRIPT * 2 MINUTES

Project Introduction & Opening Speech

Spoken Script for Project Defense, Technical Interviews & Presentation

Speaker: Amir Sohel | **Designation:** Software Engineer

Pacing: ~140 words per minute * Total Speaking Time: Exactly ~2 Minutes * Tone: Confident, Clear, Natural

[0:00 - 0:25] PART 1: GREETING & PERSONAL INTRODUCTION

"Good morning / afternoon everyone.

My name is Amir Sohel, and I am a Software Engineer. Today, I am very excited to introduce my capstone engineering project: AeroBook — a Cloud-Native Online Flight Booking and Airline Management Platform."

[0:25 - 0:55] PART 2: THE PROBLEM & MOTIVATION (WHY THIS PROJECT?)

"When we look at traditional flight reservation platforms, many are built as monolithic systems — meaning the entire website runs inside one giant program and shares a single database.

The big problem with that approach is that during high-traffic holiday rushes, thousands of people searching for flights can slow down or crash the entire system, locking out user logins and payments.

I built AeroBook to solve this problem by adopting a modern, modular Microservices Architecture."

[0:55 - 1:30] PART 3: WHAT AEROBOOK DOES & HOW IT IS BUILT

"AeroBook divides the entire airline business into 8 independent, lightweight microservices built using Java 17 and Spring Boot.

Instead of one big database, each service has its own dedicated MySQL database. We have an API Gateway as the secure front door, an Auth Service for encrypted login, a Flight Service managing schedules and live seats, a Fare Service calculating multi-class ticket prices, a Booking Service generating unique PNR codes, and a Check-In Service that lets travelers select their seats and get mobile QR boarding passes."

[1:30 - 1:55] PART 4: KEY PRACTICAL HIGHLIGHTS & TESTING

"One of the most important practical features I focused on is Safe Seat Reservation — our system safely checks seat inventory before confirming a ticket, completely preventing double-booking.

The entire system has been thoroughly tested with 109 automated unit tests passing with zero errors, and provides 50 fully documented REST API endpoints."

[1:55 - 2:00] PART 5: WRAP-UP & TRANSITION TO SLIDES

"Over the next few minutes, I will walk you through how the system works, the microservice architecture, and our future roadmap. Thank you, and let us dive into the presentation!"

Speaker Cheat Sheet & Delivery Tips

Quick Memory Triggers and Speaking Guidelines for Amir Sohel

QUICK 30-SECOND ELEVATOR PITCH (IF ASKED FOR A BRIEF SUMMARY)

"AeroBook is a modern online airline ticket booking platform built with Java 17 and Spring Boot microservices. Instead of one slow, crash-prone monolithic app, AeroBook divides airline operations into 8 clean services — including search, pricing, booking, and web check-in — each with its own MySQL database. It prevents double-booking, delivers instant digital QR boarding passes, and is verified with 109 automated tests and 50 tested REST API endpoints."

KEY BULLET POINTS CHEAT SHEET (IF YOU PREFER NOT READING VERBATIM)

- | | |
|-----------------------|---|
| 1. Introduction: | My name is Amir Sohel, Software Engineer. Project is AeroBook — flight reservation system. |
| 2. The Problem: | Legacy monoliths crash easily and have shared database bottlenecks during busy flight searches. |
| 3. The Solution: | Microservices architecture. 8 independent services with dedicated MySQL databases. |
| 4. Tech Stack: | Java 17, Spring Boot 3, Spring Cloud Eureka, Netty API Gateway, MySQL 8. |
| 5. Core Features: | Flight search, dynamic pricing (Economy/Business), safe seat booking, and digital QR boarding passes. |
| 6. Quality & Testing: | 109 unit tests passed (0 errors), 50 clean REST API endpoints, 6 complete UML diagram guides. |
| 7. Transition: | Invite the audience to look at the slides for the architecture breakdown. |

HOW TO DELIVER THIS 2-MINUTE INTRODUCTION EFFECTIVELY

- S Smile and Make Eye Contact:** Stand tall, and look directly at your examiners or audience.
- D Speak at a Calm Pace:** A 1 second between sections gives the examiners time to absorb your points.
- E Emphasize "Independent Databases":** Each service owns its own database — it shows good system design.
- M Mention the Test Count (109 Tests):** This number immediately establishes confidence in your code quality.
- T Transition Smoothly to Slide 2:** After the 30-second pitch, say "Let's dive into the architecture" and click to Slide 2 on your presentation deck.
